

Grevillea Coral Baby™

Grevillea lavandulacea x chrysophaea

No seahorses hiding in these coral flowers but here's another winner from the Austraflora stable. Small and compact (40cm H x 80cm W), it's a lovely little shrub with fine dense foliage, and the flowers bloom from winter to spring, giving the honeyeaters a great lunch site. In a container on a deck or patio, the subtle beauty of Coral Baby™ can be appreciated in detail, or plant it en masse to add its charm to small gardens. An occasional light trim will keep it neat and encourage even denser flowering; well-drained soils in cool temperate to sub-tropical and semi-arid climates are suitable, frost is not a problem, and with a little protection from salt winds it will do well at the seaside.

Quick Info:

Genus/Species:

Grevillea lavandulacea x chrysophaea

Cultivar Name: Coral Baby

Habit: Low mounding small shrub

Plant Type: Small Shrub

Height (m): 0-50cm

Width (m): none

Frost Tolerance: Medium

Growth Rate: Medium

Position: Full Sun to Part Shade

Flower Information:

Compact clusters of soft pink and creamy-white flowers; Winter-Spring

Foliage Information: Tight small dark green and dense

Cultivation: Well drained clay loam or sandy soils

Fertiliser: Low P required at around 1.6%

Climate: Cool temperate to tropical and semi arid; 2nd line coastal

Maintenance: Light trim or prune after flowering to maintain required shape
