

Grevillea Jubilee™

Grevillea alpina x rosmarinifolia

You can hedge your bets on Jubilee™, for this dense colourful shrub will fill in those awkward narrow areas between pathway and fenceline. Even in semishade, the waxy golden-red honey-rich flowers constantly draw honey-eating birds from winter into early summer. While Jubilee™ will require some trimming to shape if used as a hedge, untrimmed it will reach a metre by a metre in cool temperate, sub tropical to semi arid climates, in well drained clay or sandy loam of a neutral pH, will take heavy frosts, but will also handle near-coastal sites.

Quick Info:

Genus/Species:

Grevillea alpina x rosmarinifolia

Cultivar Name: Jubilee

Habit: Compact erect fine foliaged shrub

Plant Type: Small Shrub

Height (m): 100-150cm

Width (m): none

Frost Tolerance: High

Growth Rate: Medium

Position: Full Sun to Part Shade

Flower Information:

Bunches of waxy golden red flowers winter spring summer

Foliage Information: Small fine dense dark green

Cultivation: Well drained clay loam sandy or gravelly soils neutral to low acid pH

Fertiliser: Low P required at around 1.6 %

Climate: Cool temperate sub tropical semi arid; 2nd line coastal

Maintenance: Minimal trim to suit if grown in a container
