

Grevillea Carpet Layer™

Grevillea Copper Crest x Nectar Delight

Carpet Layer is another one for the collection of free-flowering low growing plants which cut out the extremes of ground temperature variation in summer and do it beautifully. Attractive divided foliage is festooned with large deep pink toothbrush flowers, so large they dwarf some of the honey-eaters that crowd in for tucker throughout the day, spring, summer & early winter long. Happy in cool temperate, sub tropical and semi arid climates in moist well drained clay or sandy loams, neutral to low acid ph. Carpet Layer is very frost tolerant and quite likes a sea view.

Quick Info:

Genus/Species:

Grevillea Copper Crest x Nectar Delight

Cultivar Name: Carpet Layer

Habit: Spreading groundcover

Plant Type: Ground Cover

Height (m): Not Applicable

Width (m): none

Frost Tolerance: Medium

Growth Rate: Fast

Position: Full Sun to Part Shade

Flower Information:

Long pink toothbrush flower throughout the year

Foliage Information: Deeply divided grey-green

Cultivation: Well drained clay loam or sandy soil neutral to low acid pH

Fertiliser: Low P required at around 1.6 %

Climate: Cool temperate sub tropical semi arid; 2nd line coastal

Maintenance: Minimal prune stem ends if required
